

We alert you to potential issues before they become serious problems.

Through the Warren Rogers' **fuelWRAP** online portal, we alert you to potential issues so you can address them before they become serious problems. We also customize email alerts for these warnings based on your specific needs, with your total control over the priority and frequency. Based on your tank gauge parameters and programmed alarm limits, you get critical issue alerts such as tank overfill, water in tank, tank delivery required, and many more. Issues are prioritized for you and allow you to resolve many of them without the need for expensive maintenance and facilities involvement.

Our alerts include Pressurized Line Leak Detection (PLLD), Sensor, Tank, and Wireless Pressurized Line Leak Detection (WPLLD).

Here are some of the most common alarms, however, this list is not all-inclusive:

PLLD

Priority Alarms

Annual test fail alarm
Annual test needed alarm
Gross test fail alarm
Periodic test fail alarm
Periodic test needed alarm
Shutdown alarm

Non-Priority Alarms

Probe Out
Overfill Alarm
Sensor Out
Setup Warning
Line Equipment Fault
PLLD Open Alarm

SENSOR

Priority Alarms

Sensor fuel alarm
Sensor fuel
Sensor high liquid alarm
Sensor low liquid alarm
Sensor water alarm

Non-Priority Alarms

Tank No CSLD Idle Time

TANK

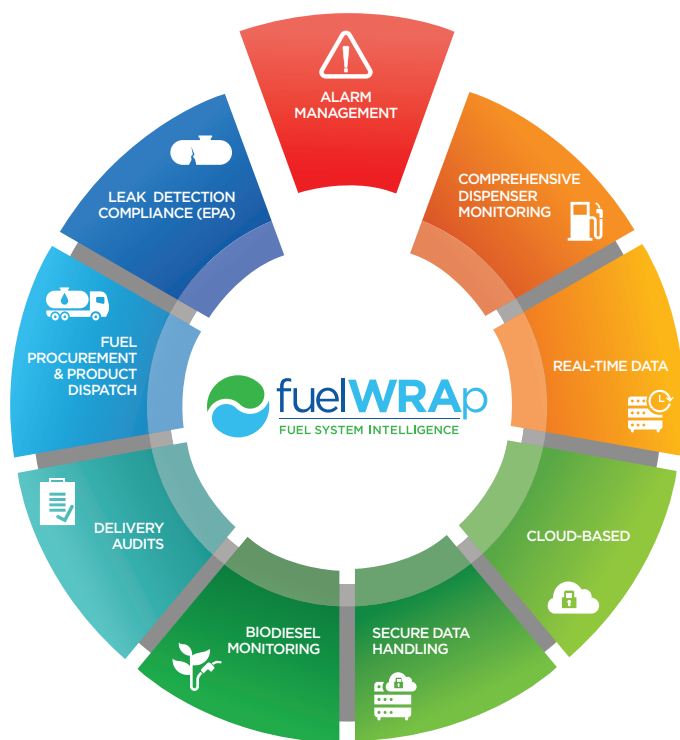

all are priority alarms

Annual leak test fail alarm
Annual test needed alarm
Gross leak test fail alarm
High water alarm
High water warning
Maximum product alarm
Periodic leak test fail alarm
Periodic test needed alarm

WPLLD

all are priority alarms

Annual test fail alarm
Annual test needed alarm
Gross test fail alarm
Periodic test fail alarm
Periodic test needed alarm
Shutdown alarm
